

VueturaTrac Package™ Return on Investment

VueturaTrac™ provides two kinds of ROI. The first is improving the efficiency of receiving, delivering, and tracking packages. We eliminate or streamline existing manual processes, reduce the labor involved, and cut costs. Typically, our customers find our 3-year ROI is more than 200%, and some have reported results twice as high. Initial costs have been recovered in less than a year solely from reductions in operations costs. Our customers who have chosen to lease find that operational savings outweigh monthly expenses immediately.

ROI does not just come from operational efficiency. VueturaTrac™ will also have a powerful impact on the productivity of all parts of your organization. Total accountability means that every item is tracked from the moment it hits the loading dock until the recipient signs for it. Packages and other high-value items cannot go missing behind equipment, in mail carts, or on the desks of recipients. Office workers can check the status of packages from their own PC, without calling the mailroom. Employees get their items on time and they always know the status.

Most of our customers report more than a 90% reduction in calls to the mailroom or receiving department. Several customers report 99% reductions in lost or "problem" items. Improved delivery service to recipients provides hard financial rewards to the organization.

Calculating your own ROI

We have developed a Microsoft Excel spreadsheet that helps you calculate your own savings from improved package receiving and tracking. To order your own Microsoft Excel spreadsheet version of the VueturaTrac™ ROI calculator, just send us an email at sales@vuetura.com and we will provide the template.
